<i>Foreword</i>	vii			
<i>Introduction to the Fourth Edition</i>	ix			
<i>Acknowledgements</i>	x			
<i>List of Abbreviations</i>	xi			
<b>1 The Digestive System</b>	<b>1</b>			
The mouth	1			
The stomach and small intestine	4			
The large intestine	13			
Study questions	20			
Further reading	20			
<b>2 Utilization of the Products of Dietary Energy and Protein</b>	<b>21</b>			
Carbohydrate, fat and protein as sources of energy, and the hormonal regulation of energy	21			
Energy metabolism	26			
Dietary protein	28			
Protein requirements for maintenance	28			
Amino acids	29			
Non-protein nitrogen	33			
Laminitis and energy intake	34			
Study questions	36			
Further reading	36			
<b>3 The Roles of Major Minerals and Trace Elements</b>	<b>37</b>			
Major minerals	37			
Trace elements	50			
Study questions	68			
Further reading	68			
		<b>4 Vitamin and Water Requirements</b>		<b>69</b>
		Vitamin requirements		69
		Water requirements and fluid losses		85
		Study questions		89
		Further reading		89
		<b>5 Ingredients of Horse Feeds</b>		<b>90</b>
		Roughage		90
		‘Processed’ feeds		94
		Functions of hay and use of other bulky feeds		98
		Compounded nuts		99
		Coarse mixes		100
		Cereals		101
		Other lesser ingredients and by-products		109
		Fat supplements		111
		Protein concentrates		116
		Pre- and pro-biotics		120
		Dietary vitamin and mineral supplements		123
		Feed storage		126
		Natural and contaminant toxicants in feeds		127
		Feed additives		133
		Prohibited substances		134
		Study questions		135
		Further reading		135
		<b>6 Estimating Nutrient Requirements</b>		<b>136</b>
		Relationship of capacity for feed to body weight		136
		Concentrates and roughages		141

Feed energy	141	Muscle energy reserves and feeding	
Digestible energy, protein and mineral requirements based on NRC (2007) recommendations	148	before exercise	230
Ration formulation using the DE and NE systems	151	The endocrine system	232
Energy and protein requirements based on INRA feed units	158	The vascular and respiratory systems	233
Energy, protein, mineral and micronutrient feed values as determined by the INRA system	164	Results of exercise	239
Simple ration formulation	168	Blood acid–base balance	244
Feed type, rate of intake, appetite, frequency and processing	173	Dietary base excess and ‘fixed’ dietary cation–anion balance	248
Shelf-life of feeds, feed contaminants and government regulations	178	Dietary protein requirements and exercise	258
Study questions	179	Feeding methods	259
Further reading	179	Study questions	264
		Further reading	264
<b>7 Feeding the Breeding Mare, Foal and Stallion</b>	<b>180</b>	<b>10 Grassland and Pasture Management</b>	<b>265</b>
The oestrous cycle and fertility	180	Grassland types	265
Gestation	183	Pasture as an exercise area	268
Parturition	183	Nutritional productivity of pasture	268
Lactation	186	Nutrients required for pasture growth and development	269
Weaning procedure	194	Sward height	275
Feeding the orphan foal	198	Intensity of stocking with horses and ruminants	275
The stallion	202	Grazing behaviour	279
Study questions	203	Supplements on pasture	280
Further reading	203	Safety of grazing areas	281
		Water supplies	281
<b>8 Growth</b>	<b>204</b>	Silage and haylage and their safety	281
Ideal conformation	204	Grassland improvement	284
Birth weight and early growth	204	Tropical grassland and forages	292
Later growth and conformational changes	207	Poisonous plants	297
Effects of dietary composition	212	Homeopathy	304
Developmental orthopaedic disease	215	Study questions	304
Study questions	221	Further reading	304
Further reading	221		
		<b>11 Pests and Ailments Related to Grazing Area, Diet and Housing</b>	<b>305</b>
<b>9 Feeding for Performance and the Metabolism of Nutrients During Exercise</b>	<b>222</b>	Arthropod parasites	305
Work and energy expenditure	222	Worm infestations	306
Energy substrates and their expenditure	224	Protozoan parasites	312
Training methods	228	Ailments related to diet	312
		Pasture ailments	330
		Liver disease	335
		Chronic weight loss	337
		The mature sick or geriatric horse	338
		Muscle ailments	338
		Housing	344
		Study questions	352
		Further reading	352

<b>12 Laboratory Methods for Assessing Nutritional Status and Some Dietary Options</b>	<b>353</b>	<b>Appendix C Chemical Composition of Feedstuffs Used for Horses</b>	<b>371</b>
Metabolic tests	353	<b>Appendix D Estimates of Base Excess of a Diet and of Blood Plasma</b>	<b>379</b>
Diets for liver disease	361	Estimate of BE of a diet from its potential fixed ion content	379
Diets for kidney disease	361	Estimate of BE of blood plasma from its bicarbonate concentration	379
Bone metabolism	361	<i>Glossary</i>	<b>381</b>
Other tests	362	<i>References and Further Reading</i>	<b>405</b>
Procedures for determining causes of suspected nutritional problems	364	<i>Conclusion</i>	<b>483</b>
Study questions	364	<i>Index</i>	<b>484</b>
Further reading	364		
<b>Appendix A Example Calculation of Dietary Composition Required for a 400 kg Mare in the Fourth Month of Lactation</b>	<b>365</b>		
<b>Appendix B Common Dietary Errors in Studs and Racing Stables</b>	<b>367</b>
